

Acoustic Shield

- 143E102 (12 lbs.) (5.4 kg).
- The Acoustic Shield effectively reduces potentially damaging sound energy from instruments played directly behind a musician.
- The initial wave from a loud musical sound (like a trumpet blast) can be reduced up to 46 dB with the shield in place.
- Shield surface is mounted on a unique cantilevering arm that reaches over chair backs for positioning just behind the head of a musician.
- Ideal positioning for maximum reduction of sound intensity is 3" to 6" (8 to 15 cm) behind the head of the musician.
- Height is measured from floor to bottom of shield and is adjustable from 10" to 43" (25 to 109 cm).
- Fully adjustable Shield is 22½" x 17" (57 x 43 cm) and outside ends are angled around the musician.
- Shield is constructed of clear, unobtrusive polycarbonate.
- T-shaped base is 20¼" x 16¼" (51 x 41 cm) and provides maximum stability and tucks under chair out of the way of musicians' feet or music stands.
- Folds compactly to 22½" wide x 27" high x 4½" thick (57 x 67 x 11 cm) and has built-in carrying handle.
- Hex wrench included for shield angle adjustment.
- Five year warranty.
- Patented.
